

DIFFERENTIAL DYNAMIC CONTENT DELIVERY WITH
PRERECORDED PRESENTATION CONTROL INSTRUCTIONS

ABSTRACT

5 Methods, systems, and computer program products are disclosed for differential
dynamic content delivery. Typical embodiments include providing a session
document for a presentation, wherein the session document includes a session
grammar and a session structured document; receiving a prerecorded presentation
10 control instruction; selecting from the session structured document a classified
structural element in dependence upon the prerecorded presentation control
instruction and in dependence upon user classifications of a user participant in the
presentation; and presenting the selected structural element to the user. In typical
embodiments, the prerecorded presentation control instruction has an associated time
15 stamp.
